

How to install our apps on a TV

For Google TV, Android TV (Chromecast, Sony, TCL, Hisense, Philips...) and Amazon Fire TV. You only need the TV remote.

Step 1: Get the Downloader app (once)

- 1 On the TV home screen, open **Search** (or the Apps / Google Play store) and search for **Downloader**. Pick the one by **AFTVnews** with the orange icon.
- 2 Press **Install**, then **Open**. Allow it to use storage if it asks.

Step 2: Allow Downloader to install apps (once)

- 1 **Google TV / Android TV:** go to **Settings** › **System** › **About**, scroll to **Android TV OS build** and press **OK** 7 times until it says you are a developer.
- 2 Then go to **Settings** › **Apps** › **Security & restrictions** › **Unknown sources** and turn on **Downloader**.
- 3 **Fire TV:** **Settings** › **My Fire TV** › **Developer options** › **Install unknown apps** and turn on **Downloader**. (If Developer options is missing: **Settings** › **My Fire TV** › **About**, press OK on the device name 7 times.)

Step 3: Install AppHub

- 1 Open **Downloader**. In the address box type:

tv.bulkbazaar.ca/bazaar

and press **Go**.
- 2 When the download finishes, press **Install**. If Play Protect warns you, choose **Install anyway** (or **More details** › **Install anyway**).
- 3 Press **Open**. AppHub now sits in your TV's apps list. You can delete the downloaded file when Downloader offers it.

Step 4: Install any of our apps from AppHub

- 1 Open **AppHub**. It opens on **TV apps**. Move with the arrows on the remote; a yellow ring shows where you are.

- 2 Go to an app's **Install** button and press **OK**. (Press OK on the picture to read about the app first.)
- 3 The first time only, the TV asks to allow AppHub to install apps. Press **Open settings**, turn on **AppHub**, then press **Back**. The install continues by itself.
- 4 Press **Install** on the TV's screen (and **Install anyway** if Play Protect asks), then **Open**.

Step 5: Keep apps up to date

- 1 Open AppHub now and then. Apps with a newer version show **Update**, and the **Updates** tab lists them all. Press **Update**, then **Install**.
- 2 New apps added to AppHub appear in the app by themselves.

Codes for each app in Downloader

You can also type an app's own code in Downloader instead of using AppHub:

App	Type in Downloader
AppHub	<code>tv.bulkbazaar.ca/bazaar</code>
NextGen Cable	<code>tv.bulkbazaar.ca/get</code>
Live Cam	<code>tv.bulkbazaar.ca/cam</code>

If something goes wrong

- 1 **"There was a problem parsing the package"**: the download was cut off. Download it again.
- 2 **"App not installed"**: uninstall the old copy (**Settings** › **Apps**), then install again.
- 3 **An app didn't update**: **Settings** › **Apps** › the app › **Force stop**, then open it again.

All our apps are free. They come from AppHub, not Google Play, so Play Protect may show a warning; that is normal for apps installed this way.
